

Sustainable Formulations for the 21st Century

Alcohol Sanitizer
Dries Skin

Our Sanitizing Cream
Moisturizes Skin

Alcohol formulas will damage your hands by removing all of your skin's natural oils leaving your hands susceptible to dermatitis, cracked hands and skin inflammation. Cracks that form on skin can increase your risk of contracting infections through the fissures and lead to conditions such as eczema. Alcohol starts to evaporate in less than 15 seconds on the hand, is that enough time to kill all of the germs? Once opened, alcohol hand sanitizer starts to evaporate and lose effectiveness once the alcohol evaporates below sixty percent concentration it will not kill as many germs. The average cost of a hospital stay for a patient with MRSA is \$27,000 dollars. **That is why it is important to use a quality NON-ALCOHOL RE-MOISTURIZING sanitizer for your hands. Our Sanitizing Cream goes on smooth, creamy, light & is highly moisturizing.**

NSF (National Sanitation Foundation) is a non-profit organization founded in 1944, whose goal is to create standards for food safety and sanitation to promote public health. When you purchase NSF certified food-service products, it means the manufacture of food service products uses only FDA approved materials.

Alcohol Sanitizers contain between 62% to 70% denatured alcohol, which makes alcohol sanitizer between 124 to 140 proof "vodka is 80 proof". Students licking and drinking alcohol based sanitizer is dangerous, compounding the problem are sanitizers that smell like strawberry or orange. Because of the increased usage of alcohol sanitizers there was a spike in calls for children to the poison control center. Some children drink it intentionally to get drunk, while others do it on a dare or because it looks tasty. Poisoning causes confusion, vomiting, drowsiness and in severe cases breathing stops.

White paper test studies for our products are available upon request.

R&R Lotion has 5 Products that are NSF Certified Either E4 or E3

- I.C Hand Sanitizer Spray Kills 99.99% of Germs E3 Cert

I.C. HAND SANITIZERS

Active Ingredient: Benzalkonium Chloride "BZK" "Alcohol Free"

21st CENTURY TECHNOLOGY

Foaming Hand Sanitizer & Hand Sanitizer Spray

I.C. Foaming Hand Sanitizer has a distinct advantage over Gelled Alcohol Hand Sanitizers. While both product forms are fast acting and allow for use without water or towels, our product gives the added benefits of being Non-Flammable, less drying to skin, and will not stain clothing.

I.C. Spray Sanitizer in an economical 2oz spray bottle kills 99.99% of Germs using the active antiseptic Benzalkonium Chloride "BZK" and is easily spreadable on your hands. Our advantage over Alcohol Sanitizers is that it will not sting or hurt while applying over cracked and sensitive hands.

Alcohol Hand Sanitizers can actually become less effective with repeated use and make the skin dirtier, not cleaner due to the removal of protective natural skin oil and entrapment of dead skin cells by the polymer thickeners used in Gelled Alcohol products.

Benzalkonium Chloride is a unique non-drying, moisturizing, and conditioning formulation that kills 99.99% of most the common Germs in just 15 seconds.

It is also NSF approved E3 for no-rinse hand sanitizing for food handlers.

National Sanitation Foundation Cert E3 Food Processing Alcohol Free, Non-Flammable, No VOCs, No Hazmat BZK is Considered an Antiseptic by the FDA Will NOT Sting When Applied to Cracked Skin Formulated for Institutions Kills 99.99% of Germs

I.C. HAND SANITIZING CREAM

Goes on Smooth, Creamy, Light & Highly Moisturizing

On April 11, 2019, the FDA issued their final rule and effectiveness of consumer hand sanitizers. At this time, the FDA recognizes three active ingredients—benzalkonium chloride, ethyl alcohol, and isopropyl alcohol as consumer or healthcare antiseptics. IC Antibacterial Sanitizing Cream uses BZK to kill 99.99% germs on contact. This formula is 'Alcohol Free' and contains such re-moisturizers as **Sunflower & Shea Butter**, Vitamins, Succulents and Botanicals.

Alcohol formulas will damage your hands by removing all of your skin's natural oils leaving your hands susceptible to dermatitis, cracked hands and skin inflammation.

While dry and cracked hands may not sound serious, they can be. Dermatitis can be caused by continuously washing your hands and using Alcohol Sanitizers. Dermatitis affects the integrity of the skin as a barrier to Bacteria & Pathogens. *Whatever your preferred method of washing or using an alcohol sanitizer, re-moisturizing your hands afterward is always the best defense for keeping germs, infection and discomfort at bay.*
